SUMMARY

Computer Science student and software engineer with experience across React, Node.js/Express, PostgreSQL, and LLM-based application development, including a freelance client platform and a conversational AI booking system, deployed on Vercel and Render.

EDUCATION

VIT Bhopal University,

Bhopal, India

Bachelor of Technology in Computer Science and Engineering (AI & ML)

2024–2028

TECHNICAL SKILLS

Languages: Java, Python, JavaScript (ES6+), SQL, PHP, HTML5, CSS3

Frontend: React.js, React 19, Vite, Tailwind CSS, React Router, Responsive Design, Accessibility

Backend & APIs: Node.js, Express.js, REST APIs, PHP, Zod, Chrome Extension APIs

AI / LLM Engineering: Groq SDK, LLaMA 3.3 70B, LLaMA 3.1 8B, Gemma 2 9B, Prompt Engineering, Structured/Schema-Validated Output

Databases & Cloud: PostgreSQL, Supabase, MySQL, Vercel, Render

Developer Tools: Git, GitHub, VS Code, Chrome DevTools, Agile Collaboration

Problem Solving: LeetCode – 44 submissions

EXPERIENCE

AI Engineering Intern – NimbleBiz (Remote),

Sept. 2026 – Present

AI Engineering, Full-Stack Development

- Building a versioned FastAPI product layer around an existing Call Center AI POC (transcription, diarization, sentiment, churn, QA), adding authentication, upload, call, and usage-telemetry endpoints without modifying the core processing engine.
- Implemented JWT-based authentication (register/login/me) with bcrypt password hashing, plus account-scoped upload and call ownership with cross-account access rejected and verified.
- Added per-account upload quotas and sliding-window rate limiting on upload and auth endpoints, and account-scoped usage telemetry (upload count, audio duration, processing time) exposed via an authenticated API.

Frontend Web Development Intern – AKS (Remote),

May 2026 – Present

React, Firebase, Google OAuth, Typeform

- Built the hero section and full homepage, including the login page, as React components for a live, publicly deployed product.
- Integrated Firebase and Google OAuth for authentication, and connected a Typeform-based flow powering the site’s “join as a cofounder” call-to-action.

Freelance Full-Stack Web Developer – DevInterio,

2026

HTML, CSS, JavaScript, PHP, MySQL

- Scoped, built, and deployed a 35-page business website for an interior design client with a custom PHP/MySQL backend and admin panel, now reaching 392 active users and 394 new users year-to-date.
- Built self-service admin tooling for blog publishing, video management, and gallery updates, replacing manual content changes with client-operated workflows.
- Independently handled post-launch support – server configuration, routing, caching, and .htaccess issues.

PROJECTS

StylistAI – AI-Powered Appointment Booking Assistant

Live Demo | GitHub

React 19, Vite, Node.js/Express, Groq LLaMA, Supabase PostgreSQL, Google Calendar OAuth, Vercel/Render

- Built a full-stack conversational AI platform where customers discover services, check stylist availability, and book appointments through natural-language interaction.
- Implemented a 3-tier fallback chain across Groq-hosted LLaMA 3.3 70B, LLaMA 3.1 8B, and Gemma 2 9B, with responses constrained to a Zod-validated JSON schema.
- Designed the PostgreSQL booking schema with a unique constraint on (stylist, date, time) to prevent double-bookings, integrated Google Calendar OAuth sync with graceful API-failure fallback, and built an admin dashboard (appointments, staff/customer records, AI telemetry) alongside edge-case handling for invalid dates, closed days, and CORS/payload limits.
- V2 (in progress): frontend & product workstream of a two-developer rebuild – authentication UI, role-based dashboards, and calendar interfaces – while the backend workstream adds server-enforced RBAC and a tool-based LLM architecture.

NoteLift – Chrome Extension

Chrome Web Store | GitHub

JavaScript, Chrome Storage API, Chrome Extension APIs

- Built and published a text-to-note Chrome extension with 347 installs: a capture-to-save workflow using browser-native storage, with no backend dependency and all persistence/UI state managed client-side.

Personal Portfolio – rohitdubey.dev

Live Website

React, JavaScript, Vercel, Google Analytics

- Designed and deployed a personal engineering portfolio reaching 493 active users and 5.8K events year-to-date.

CERTIFICATIONS

Oracle Certified Foundations Associate: Java – Oracle University

June 2026

Cloud Computing (12-Week Course – Elite) – NPTEL, IIT Kharagpur

April 2026

Applied Machine Learning in Python – University of Michigan, Coursera

December 2025

Career Essentials in GitHub Professional Certificate – GitHub

January 2026
